Test viruses
For the declaration of efficacy of disinfectants against viruses*

1. Virucidal according to European norms

- **Adeno virus**
  Non-enveloped virus from the family of Adenoviridae

- **Polio virus**
  Non-enveloped virus from the family of Picornaviridae

- **Murine noro virus**
  Non-enveloped virus from the family of Caliciviridae
  Surrogate virus for human noro virus

2. Virucidal against enveloped viruses*

- **BVDV**
  Enveloped virus from the family of Flaviviridae
  Surrogate virus for Hepatitis-C-virus (HCV)

- **Vaccinia virus**
  Enveloped virus from the family of Poxviridae

3. Virucidal according RKI/DVV*

- **Adeno virus**
  Non-enveloped virus from the family of Adenoviridae

- **Polio virus**
  Non-enveloped virus from the family of Picornaviridae

- **Polyoma virus (SV 40)**
  Non-enveloped virus from the family of Papovaviridae

- **Vaccinia virus**
  Enveloped virus from the family of Poxviridae

* according to the Statement of the research group of the Robert Koch Institute (RKI) and the expert committee “virus disinfection” of the German Association for the Control of Virus Diseases (DVV) and the committee “disinfectants” of the German Society for Hygiene and Microbiology (DGHM)

According to the German guidelines of the DVV* and RKI**, efficacy discriminates between non-enveloped and enveloped viruses. Therefore products are named “virucidal” or called “virucidal against enveloped viruses”.

*B: German Registered Association for Combating Viral Diseases
**RKI: Robert Koch-Institute
